Introduction

This Level I Contamination Screening Evaluation was performed to screen potentially contaminated sites that are within or adjacent to the Recommended Alternative, as well as provide recommendations for future actions. The purpose of this report is to present the findings of a contamination screening evaluation for the Eastbound Volusia County Site. This report identifies and evaluates known or potential contamination sites within or adjacent to the project area that may affect implementation of the project. This report also presents recommendations for additional analysis and documents possible project impacts and their mitigations.

1.1 Project Description

The Florida Department of Transportation (FDOT) is conducting the *Truck and Freight Alternative Site Analysis Project Development and Environment (PD&E) Study* to identify, evaluate, and recommend truck and freight parking sites along or near the I-4 corridor within Osceola, Orange, Seminole, and Volusia Counties that are viable for private and public operator use. In 2018, FDOT conducted a state-wide truck parking study to assess existing truck parking and future demand. The study found the I-4 corridor is the most critical corridor for truck parking needs in the state, specifically between the Osceola/Polk County Line and I-95. Based on the 2018 study, the I-4 corridor within FDOT District 5 was found to need 481 truck parking spaces; however, there are currently only 36 truck parking spaces available throughout the I-4 corridor located at the Longwood Truck Parking facility.

The goal of the PD&E Study was to identify at least one truck parking facility within each county to serve regional freight demand in Central Florida and balance the parking available throughout the I-4 corridor. An initial screening of the study area was conducted to identify alternatives that met the purpose and need for the project. The initial alternatives were further screened to identify viable alternatives that minimize environmental and community impacts. As a result of the engineering and environmental analyses completed during the PD&E Study and the comprehensive public engagement plan, five recommended sites are being advanced for project development and are programmed for the final Design phase. These five recommended sites provide a total of approximately 894 truck parking spaces to accommodate existing and future needs. A regional map showing the location of the Eastbound Volusia County recommended site (designated Volusia County Site 1A) is provided in **Figure 1**.

A preliminary concept for Volusia County Site 1A was developed to establish site boundaries and is provided in the *Truck and Freight Alternative Site Analysis PD&E Study Preliminary Engineering Report (PER)*, under separate cover. The study area for the site included the proposed Right-of-Way (ROW), I-4 access ramps, and land for wildlife conservation. The recommended site is located adjacent to I-4. The preliminary site concepts include parking layouts, site access, proposed sidewalks, stormwater management, restroom facilities, and landscaping/greenspace areas.

1.2 Project Purpose and Need

The purpose of this project is to provide needed truck parking facilities to serve regional freight parking demand within or near the I-4 corridor to address safety and mobility. Volusia County Site 1A is one of five recommended truck parking sites identified by the *Truck and Freight Alternative Site Analysis PD&E Study* to address the truck parking demand along or near the I-4 corridor in Osceola, Orange, Seminole and Volusia Counties. The Recommended Alternative to serve freight demand for I-4 Eastbound in Volusia County is designated Volusia County Site 1A.

The need for this project is based on existing and future truck parking demand along the I-4 corridor. The parking demand is a function of both freight mobility and federal hours of service regulations for commercial vehicle operators. These regulations involve mandated maximum hours of service, maximum consecutive hours and days, and require regular minimum 30-minute breaks after eight cumulative hours. Without the appropriate freight parking facilities, drivers may be forced to spend unnecessary time searching for available parking, or they may be required to park in unsafe and/or improper locations due to unforeseen circumstances such as weather, congestion, and other traffic incidents.

The trucking industry is indispensable to the American economy and the quality of life for our communities and consumers that depend on delivered goods. Apart from many other roles and responsibilities, truck drivers are responsible for delivering raw materials to manufacturing facilities and finished products to retail and commercial sites. Businesses both big and small depend on truck drivers to safely transport their items across the nation, while maintaining efficient delivery times. According to Trucker Path survey (2018), 48% of truck drivers spend over an hour searching for a place to park. This equates to a \$5.1B loss in revenue annually, including wasted fuel, wages lost, maintenance, and associated crashes.

The nationwide shortage of truck parking capacity continues to be a critical transportation industry focus. According to data published by the American Trucking Association (ATA) in 2022, there are about 3.5 million truck drivers nationwide and approximately 313,000 truck parking spaces; for every 11 drivers, there is one truck parking space. Truck parking needs have been ranked as a top critical issue in the trucking industry and are a national safety concern. In December 2020, the Federal Highway Administration (FHWA) hosted the 5th meeting of the National Coalition on Truck Parking to provide an update on studies and initiatives to advance safe truck parking. In the update, FHWA noted that truck parking concerns are nationwide but most critical along key freight corridors and in metropolitan areas. Additionally, nationwide survey results showed that shortages exist at all times of day, week, and year, but mostly overnight and weekdays.

Florida has experienced tremendous growth in people and goods over the last few decades and continued growth is expected. In 2018, FDOT conducted a statewide truck parking study to assess existing truck parking and future demand. The study found the I-4 corridor is the most critical corridor for truck parking needs in the state, specifically between the Osceola/Polk County Line and I-95, which is the focus of the *Truck and Freight Alternative Site Analysis PD&E Study*.

Concurrently, the FDOT District Five Truck Parking Study (2019) determined the average freight parking demand along I-4 was 481 spaces per day (2016 existing condition). In 2020, FDOT modified the I-4 Eastbound Rest Area in Seminole County to a designated truck parking facility to better serve demand. As of 2022, the only designated truck parking facility within the four-county area is located at this Longwood Truck Parking facility. The facility provides 36 existing truck parking spaces, leading to a shortage of 445 truck parking spots based on 2016 conditions.

As the number of people and the amount of goods continue to increase in Florida, freight traffic continues to be an essential part of our state's growth and economy. Based on the 2019 study, the demand for truck parking spaces is anticipated to grow to 750 spaces by 2025 and 883 parking spaces by 2040 within Osceola, Orange, Seminole and Volusia Counties. The projected demand is anticipated to intensify as the development of more distribution facilities like the Amazon Fulfillment Center in Volusia County, the Northport Industrial Park in Seminole County, the Infinity Park in Orange County, and JELD-WEN in Osceola County continue to be developed to better serve the region's population.

The need for the project is to address existing truck parking deficiencies and accommodate future truck parking demand to better serve freight mobility and improve safety. There are no truck or freight parking facilities maintained exclusively for parking and non-retail public use in Volusia County. Volusia County Site 1A will provide needed truck parking capacity of 275 spaces to serve the existing and future parking demand.

1.3 Alternatives Analysis Summary

As part of the *Truck and Freight Alternative Site Analysis PD&E Study*, more than 77,000 parcels were examined for their potential viability as a freight parking site for trucks traveling along I-4 within Osceola, Orange, Seminole, and Volusia Counties. The methodology for identifying, analyzing, and refining potential sites is described in the PER, under separate cover.

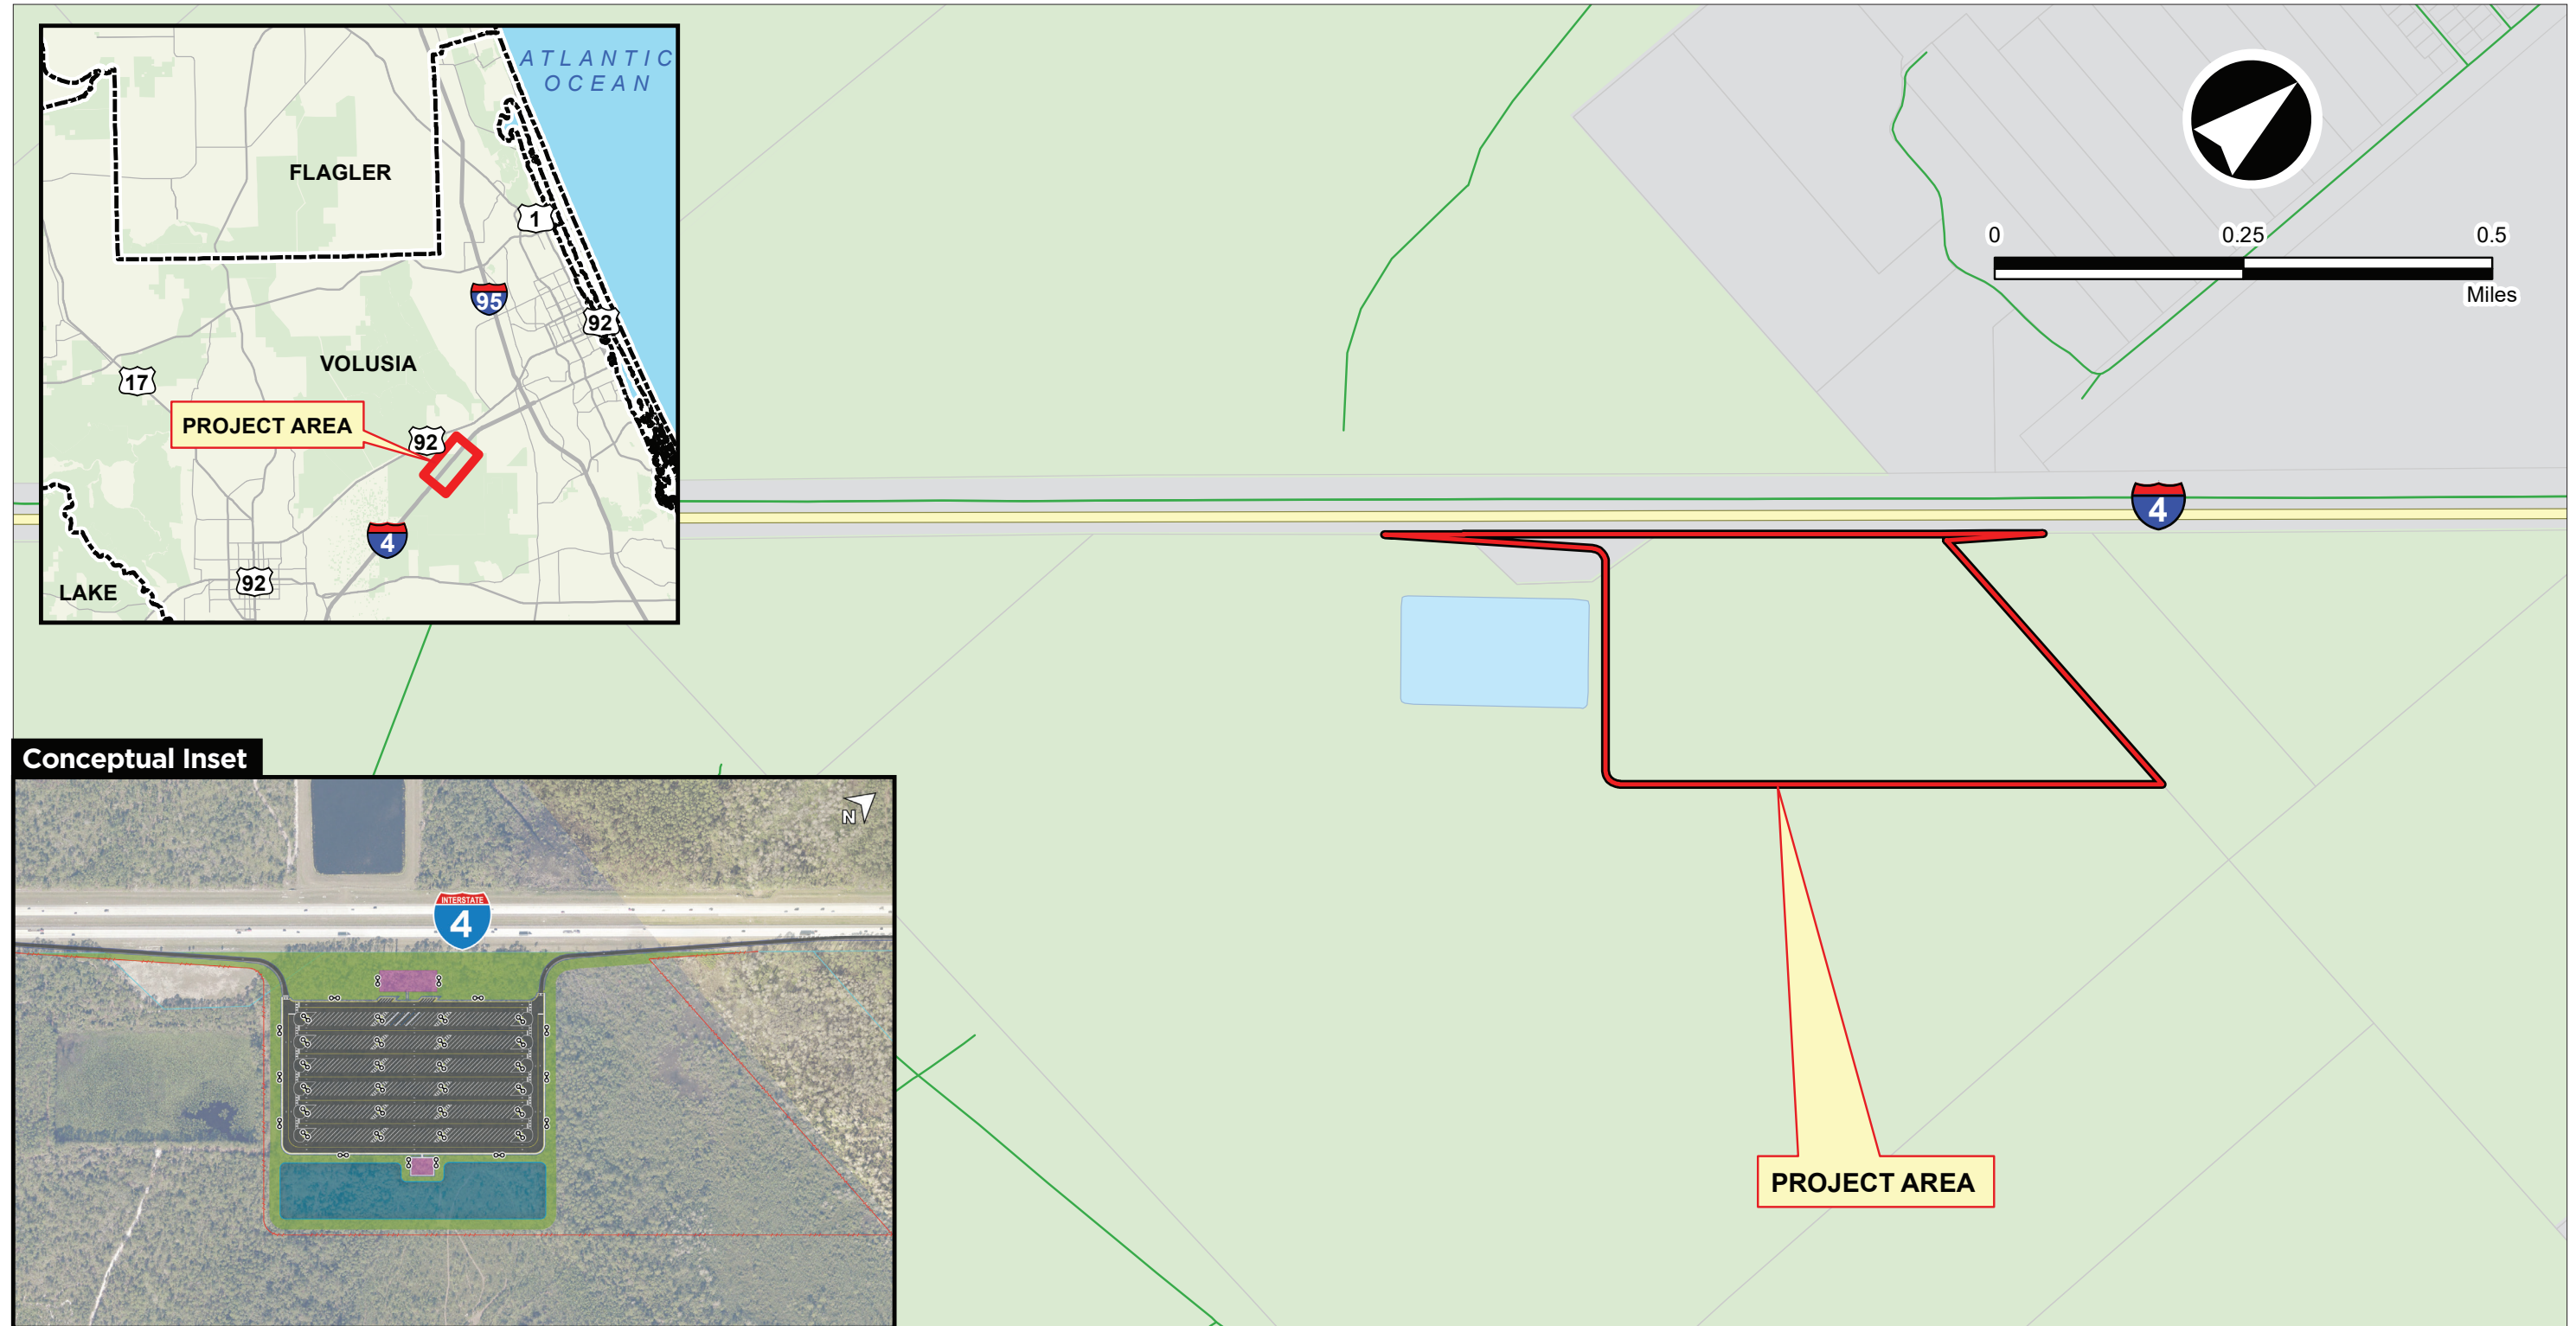

Based on the methodology described in the PER, two potential sites in Volusia County were identified for further review, analysis, and refinement. An alternatives analysis was conducted for the two Volusia County sites and the No-Action Alternative. Volusia County Site 1A was identified as the recommended site to serve I-4 Eastbound. The other Volusia County site was also identified as a recommended site, to serve I-4 Westbound. A detailed description of the alternatives and the results of the alternatives analysis are documented in the PER, under separate cover. Volusia County Site 1A is the Recommended Alternative for the proposed truck parking site in Volusia County for I-4 Eastbound and is being programmed for further project development.

1.4 Site Description

Volusia County Site 1A (**Figure 2**) is located along I-4 approximately 4.5 miles west of the I-95 interchange. The recommended site, located at a former Volusia County rest area, will supply 275 truck parking spaces and restroom facilities. Eight-foot sidewalks will be provided around the recommended site to allow pedestrians to safely walk from their individual truck parking spot to the restroom facilities.

The recommended site is anticipated to require 73.3 acres of ROW, impacting two parcels both publicly owned by the City of Port Orange. Wildlife fencing and wildlife sensitive lighting will be provided around the recommended site due to the proximity of the existing wildlife crossing. Ramps will be provided on I-4 Eastbound for direct access to and from Volusia County Site 1A. No local road access will be provided to the sites.

The recommended Volusia County Site 1A will include one wet detention stormwater pond located along the southeast parcel line and is 7.15 acres. The proposed ROW for the site includes a proposed conservation area outside the limits of construction and surrounding the fenced truck parking area to provide an enhanced natural buffer. The conservation area (31 acres) is east of the truck parking area and will remain as existing (undeveloped) with no site clearing.

Contamination Screening

2.1 Methodology

For the purposes of this study, state and federal records were queried by Lightbox. A Radius Report, dated August 7, 2023, included in **Appendix A**, included the following review areas:

- ½ Mile for Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), National Priorities List (NPL) Superfund sites, or landfill sites.
- 1000 feet for non-landfill solid waste sites (such as recycling facilities, transfer stations and debris management areas).
- 500 feet for petroleum sites, dry cleaners and other contaminated sites (not included above)

Historical aerials, topographic maps, city directories, Sanborn mapping, and zoning maps were studied to identify current and past uses of the site and surrounding area. The Florida Department of Environmental Protection (DEP) Oculus Records were reviewed as needed based on historical records and Radius Report results. Based on the review of environmental records, nearby sites were ranked based on the methodologies presented in Part 2, Chapter 20 (revised July 1, 2023) of the PD&E Manual. Each site was assigned a contamination risk rating (CRR) of No, Low, Medium, or High based on the following criteria:

- 1) No - A review of available information on the property and a review of the conceptual or design plans indicates there is no potential contamination impact to the project. It is possible that contaminants have been handled on the property. However, findings from the Level I evaluation indicate that contamination impacts are not expected.
- 2) Low - A review of available information indicates that past or current activities on the property have an ongoing contamination issue; the site has a hazardous waste generator identification (ID) number, or the site stores, handles, or manufactures hazardous materials. However, based on the review of conceptual or design plans and/or findings from the Level I evaluation, it is not likely that there would be any contamination impacts to the project.
- 3) Medium –After a review of conceptual or design plans and findings from a Level I evaluation, a potential contamination impact to the project has been identified. If there is insufficient information (such as regulatory records or site historical documents) to make a determination as to the potential for contamination impact, and there is reasonable suspicion that contamination may exist, the property should be rated at least as a “Medium”. Properties used historically as gasoline stations and which have not been evaluated or assessed by regulatory agencies, sites with abandoned in place underground petroleum storage tanks or currently operating gasoline stations should receive this rating.
- 4) High - After a review of all available information and conceptual or design plans, there is appropriate analytical data that shows contamination will substantially impact construction

activities, have implications to ROW acquisition or have other potential transfer of contamination related liability to the FDOT.

Field reviews of the project area were conducted on February 20, 2023. The project area and surrounding area were inspected for the presence of storage tanks, chemical containers, ground-staining, monitoring wells, and other signs of potential contamination.

2.2 Land Uses

Current and recent land uses were assessed based on zoning, aerial photography, and environmental record data, see **Table 1**, below, and **Figure 3**.

Table 1: Land Use

Site Zoning	Current Use	Former Use	Surrounding Land
Governmental/Vacant Governmental	Undeveloped/ Stormwater Pond	Undeveloped	Undeveloped/ I-4

2.3 Hydrologic Features

The site is within Volusia County, Florida and is underlain by the Upper and Lower Floridan aquifer as well as surficial aquifer. The Upper Floridan Aquifer is generally located from the surface to a depth of approximately 350 to 900 feet where it interfaces with the Lower Floridan Aquifer. This carbonate-rock aquifer consists of layers of limestone and dolomite. The Floridan aquifer spans most of Florida, Alabama, Georgia, and some of South Carolina. The transmissivity ranges from 25,000 to 1,000,000 feet squared per day in areas where the upper confining material of the aquifer is less than 100 feet thick. Groundwater flow in this portion of Seminole County is generally to the east within the Floridan Aquifer.

The topography throughout the site slopes downhill from the southwest side to the northeast side with elevations ranging from 33 to 42 feet North American Vertical Datum (NAVD) (**Figure 4**). The site discharges to surrounding wetlands toward the Tomoka River Outstanding Florida Water (OFW). The site is located within Waterbody Identification (WBID) 2634 – Tomoka River, which is not impaired for nutrients. The existing site consists of undeveloped mixed forests and wetlands. It is bordered to the northwest by I-4 and by the Port Orange City Forest on all other sides. The soils encountered within the project site are Hydrologic Soil Group (HSG) A/D, A, and B/D. A summary of the soils within the project site are provided in **Table 2**.

Table 2: Soils

Soil No.	USDA Soil Name	Seasonal High Ground Water		HSG
		Depth* (feet)	Duration (months)	
17	Daytona sand, 0 to 5 percent slopes	3.3-4.2	1-4	A
27	Hontoon muck, frequently ponded, 0 to 1 percent slopes	0	6-9	A/D
29	Immokalee sand	0.8	1-2	B/D
32	Myakka-Myakka, wet, fine sands, 0 to 2 percent slopes	1	7	A/D
56	Samsula muck, frequently ponded, 0 to 1 percent slopes	0	12	A/D

2.4 Field Reviews

Field review of the project area was conducted on February 21, 2023. Due to high wildlife fencing along the roadway corridor, and a lack of access to the site otherwise, portions of the site which were not visible from the I-4 ROW were not able to be inspected. However, areas observed are believed to be sufficient and restricted access is not anticipated to affect the results of this study. The site currently comprises undeveloped vacant land which comprises primarily forested uplands and wetlands. Wildlife crossings are located along the I-4 corridor, with one crossing located along the proposed off-ramp within the site. See **Appendix C** for site photographs.

2.5 Aerial Photography

Historic aerial photography dating back to 1943 was obtained and reviewed for this assessment, as detailed in **Table 3**. The historic aerial photography was reviewed to identify historic agricultural land uses on and surrounding the site. Prior to construction of I-4 (between 1952 and 1969), the historic aerial photography shows upland areas of the site comprised of agricultural pastureland used for grazing. No evidence of cattle dip vats was noted near the project area. No other agricultural land uses were identified on or surrounding the site. The historic aerial photography is provided in **Appendix A**.

Table 3: Historic Aerial Observations

Year	Notes
1943	The site and surroundings are undeveloped. The southwest portion of the site contains a mix of uplands and wetlands, whilst the northeast portion of the site is entirely wetland.
1952	No significant changes.
1969	I-4 has been developed immediately along the site’s northwestern boundary. A rest stop is located within the southwestern portion of the site associated with I-4. A portion of a stormwater pond is located within the site, south of the rest stop along the southwest boundary of the site. No buildings were constructed as part of the rest stop. A residential property has been developed 500-ft north with an unpaved road from the north for access.
1973	No significant changes.
1976	No significant changes.
1980	No significant changes.
1984	No significant changes.
1992	No significant changes.
1995	No significant changes.
1999	No significant changes.
2007	Additional residential development has occurred 500-ft north.
2010	The access road to the rest stop located within the southwestern portion of the site has been removed. The paved rest stop area remains.
2015	Construction of a pond has commenced 280-ft north across I-4. Ponds have also been constructed on either side of I-4, approximately 1,400-ft north.
2019	Construction of the pond 280-ft north has been completed. Land clearing has occurred to the west of the pond. The paved rest stop area appears removed or overgrown.

2.6 City Directories

City directories are historical listings of businesses and residences in a given area, similar to a standard telephone book. The site occupant and addresses listed for previous years can identify past land uses. Environmental Data Resources (EDR) was contracted to provide a city directory review for the study area. EDR researched city directories from 2005 through 2020 at approximately 5-year intervals. No obvious potential contamination sites were identified by the City Directory Report. The EDR City Directory Report is included in **Appendix A**.

2.7 Historic Quadrangle Maps

Historical quadrangle maps dating back to 1962 were obtained and reviewed for this assessment, as detailed in **Table 4**. The historical quadrangle maps do not depict landfills, quarries, or other conditions that would represent potential contamination concerns on, or in the immediate vicinity of, the study area. A borrow pit was noted on the earliest historic quadrangle, which provided base materials for the

construction of I-4, which now serves as a pond. There are no contamination concerns with this borrow pit. The historic quadrangle maps are provided in **Appendix A**.

Table 4: Historic Quadrangle Observations

Year	Notes
1962	The site comprises primarily undeveloped uplands and wetlands. A small portion of a pond, marked as a borrow pit, is located within the site, along the southwest boundary of the site and continues offsite. I-4 has been constructed immediately along the site’s northwestern boundary. Several other ponds marked as borrow pits are located along I-4. The uplands within the surrounding areas are marked with Jeep Trails. The Daytona Highridge Estates have been developed 0.8 miles to the north, north of which a pipeline is delineated north-northeast to west-southwest.
1970	No significant changes.
1980	No significant changes.
1988	No significant changes.
1993	No significant changes.
2012	No significant changes within the site. A roadway, Roosevelt Court is shown 0.2 miles north of the site. Roadways are also shown 0.75 miles south of the site.
2015	No significant changes.
2018	No significant changes.

2.8 Fire Insurance Maps

Fire insurance maps are used by insurance companies in assessing fire risk. These maps contain details about building construction, business type, building contents, fuel storage tanks, and other factors affecting fire risk. Sanborn fire insurance maps were not available for the study area. The Certified Sanborn Map Report is included in **Appendix A**.

2.9 Regulatory Interviews

No interviews were conducted as part of this Contamination Screening Evaluation Report (CSER). However, a preliminary Contamination Screening Report was developed as part of the *Truck and Freight Site Analysis PD&E Study* and was reviewed in July 2022 by Mr. Randy Stafford, former District 5 Contamination Impact Coordinator. Mr. Stafford agreed with the recommended risk ratings of the candidate sites and their potential associated remediation efforts.

2.10 Records Review

A review of environmental records identified two individual sites including an I-4 Rest Area – Inactive Disaster Debris Management Site and a diesel petroleum spill adjacent to I-4 Eastbound. Details for the two sites are provided in **Table 5**. Environmental records related to the 50-gallon diesel petroleum spill

adjacent were available for review through DEP Oculus site. These records included a DEP Discharge Report Form and a DEP Emergency Response Incident Report form. The environmental records are provided in **Appendix B**.

Table 5: Records Review Summary

Map ID	Facility Name/Address	Distance (ft.) / Direction	Record Type, concern
1	I-4 REST AREA – INACTIVE DISASTER DEBRIS MANAGEMENT SITE	On-site/SW	Registered Solid Waste Facility/Landfill (Disaster Debris Management Site)
2	I-4 EB NEAR MM 127	300ft/SW	50-gallon diesel petroleum spill adjacent to highway.

3

Conclusions and Recommendations

3.1 Findings

The site is primarily comprised of undeveloped forested tracts flanking I-4, with a small area to the west previously utilized as a Volusia County rest area. Based on the desktop and field reviews, two adjacent facilities were identified that may present a hazardous material concern to the proposed project site. After further review, Site 1: Former I-4 Rest Area - Inactive Disaster Debris Management Site was assigned a CRR of “no” indicating no contamination impacts are expected. Site 2: AMPM Transport LLC OER #2015-7I-52893Z was assigned a CRR of “low”. Records for Site 2: AMPM Transport LLC OER #2015-7I-52893Z indicate a small roadside spill of petroleum was recorded in 2015. While the potential for encountering impacted soils does exist, the environmental risk associated with Volusia County Site 1A is low. No additional properties were rated medium or high risk and no additional investigation is recommended beyond the sites listed below. A site figure depicting contamination sites is included as **Figure 5**. A summary of the potential contamination sites and risk ratings is provided in **Table 6**.

Table 6: Contamination Sites Risk Rating Summary

Site No.	Site Name	Risk Potential
1	I-4 REST AREA	No
2	AMPM TRANSPORT LLC OER #2015-7I-52893Z	Low

Site No:	1	Risk Potential:	No			PUBLIC RECORDS:			
Site Name	I-4 REST AREA					The site is recorded as an inactive Disaster Debris Management Site. No records related to the use of the site were available through the FDEP Oculus site.			
Site Address	Eastbound I-4, 2 miles west of US 92, Volusia County, FL 32124								
Site Location	Within and adjacent to the eastbound I-4 right-of-way.								
Distance/Direction	On-site								
Facility ID Nos:	99968								
Database Sources:	Registered Solid Waste Facility/Landfill (Disaster Debris Management Site)					INTERVIEW INFORMATION:			
						n/a			
Historical Land Use	Native forested land.					SITE OBSERVATIONS:			
						There was no evidence of waste storage or management at the facility.			
Current Land Use	Disused rest area.					CONCLUSIONS: Based on the site being a temporary waste management site with no remaining waste, the site has been assigned a CRR of no.			
						Discharge Date:	n/a	Cleanup Date:	n/a
Contaminants	n/a						Soil	Groundwater	
TANKS	U/A	Documented/ Known Impacts:	No	No		Documented/ Known Impacts:	No	No	
n/a									

Site No:	2	Risk Potential:	Low			PUBLIC RECORDS:			
Site Name	AMPM TRANSPORT LLC OER #2015-7I-52893Z					According to the FDEP Discharge Report Form dated May 4, 2015, a petroleum release occurred on I-4 east bound at mile marker 128.5 after a semi-truck veered off the roadway into a wooded area. Approximately 50 gallons of diesel fuel was lost to the soil as a result of the accident. IMS extracted 53.5 gallons of diesel fuel and removed debris. It was noted that remediation was required. There is no record of further work being completed.			
Site Address	I-4 Eastbound near Mile Marker 127								
Site Location	Wooded area adjacent to I-4 right-of-way.								
Distance/Direction	300 feet/ Southwest								
Facility ID Nos:	9815625					INTERVIEW INFORMATION:			
						n/a			
Database Sources:	Storage Tank Contamination Monitoring (STCM)					SITE OBSERVATIONS:			
						This area was inaccessible due to high wildlife fencing and was unable to be accessed from the right-of-way. This location was observed from the right-of-way and no signs of contamination were noted by visual or olfactory observation.			
Historical Land Use	None – Native forested land.					CONCLUSIONS: Based on the distance from the spill to the site, and the low quantity of diesel petroleum presumed remaining, this site has been assigned a CRR of low.			
Current Land Use	Right-of-way/native forested land.					Discharge Date:	05/02/2015	Cleanup Date:	n/a

Volusia County Site 1A
I-4 Direct Access, 4.5 miles west of I-95**

3.2 Project Impacts and Conclusion

Nearby facilities each have a CRR of no or low in relation to the proposed site. Onsite observations found no signs of hazardous or petroleum contamination. The overall environmental risk associated with Volusia Site 1A is low, with the only known source of contamination being a roadside spill that was responded to at the time of the incident in 2015. No additional concerns were identified during the fieldwork and no further investigation is recommended. There is potential to encounter soils associated with the spill in 2015. Should contaminated soil be encountered during construction, proper removal and disposal is recommended in accordance with state and federal law.

3.3 Limitations

The findings, opinions, conclusions, and recommendations presented herein are based on reasonably ascertainable information contained in the public record. VHB does not guarantee the completeness or accuracy of this information. Additional limitations include:

- No subsurface investigations occurred during the course of this assessment.
- This study does not include surveys of wetlands, endangered species, asbestos containing materials, lead-based paints, or other potential hazardous building materials.

Property owners were not interviewed for the purposes of this assessment.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Protection's Facility Directory (Solid Waste Facilities).

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
I-4 REST AREA Database: SWF/LF, Date of Government Version: 04/10/2023 Facility-Site Id: 99968 Class Status: INACTIVE (I)	EASTBOUND I-4, 2 MIL	0 - 1/8 (0.000 mi.)	1	8

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

NPDES: Domestic and Industrial Wastewater Facilities

A review of the NPDES list, as provided by EDR, and dated 05/01/2023 has revealed that there is 1 NPDES site within approximately 0.125 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

ENG CONTROLS: Institutional Controls Registry

The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass a variety of engineered remedies to contain and/or reduce contamination, and/or physical barriers intended to limit access to property. ECs include fences, signs, guards, landfill caps, provision of potable water, slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

Lists of state and tribal brownfield sites

BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset, as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

DADE MRE: Maimi River Enforcement

The Miami River Enforcement database files were created for facilities and in some instances vessels that were inspected by a workgroup within the Department that was identified as the Miami River Enforcement Group. The files do not all necessarily reflect enforcement cases and some were created for locations that were permitted by other Sections within the Department.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Northwest Map: 11547998 DAYTONA BEACH NW, FL
Version Date: 2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
12127C0500H	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
12127C0350H	FEMA FIRM Flood data

12127C0525H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
DAYTONA BEACH SW	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Holocene
Code: Qh (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: SMYRNA

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly. Soils may have a saturated zone, a layer of low hydraulic conductivity, or seepage. Depth to water table is less than 1 foot.

Hydric Status: Soil meets the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	13 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 20.00 Min: 6.00	Max: 7.30 Min: 3.60
2	13 inches	28 inches	sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 0.60	Max: 7.30 Min: 3.60
3	28 inches	80 inches	sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 20.00 Min: 6.00	Max: 5.50 Min: 4.50

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: mucky - fine sand

Surficial Soil Types: mucky - fine sand

Shallow Soil Types: sand

Deeper Soil Types: fine sand

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by VHB were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # EFC1-4306-98CA
PO # NA
Project 63640.01 Volusia 1A

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: EFC1-4306-98CA

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

VHB (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Discharge Report Form

PLEASE PRINT OR TYPE

DEP Form # 62-761.900(1)

Form Title Discharge Report Form

Effective Date: July 13, 1998

Instructions are on the reverse side. Please complete all **applicable** blanks

1. Facility ID Number (if registered): _____ 2. Date of form completion: 5/4/15

3. General information

Facility name or responsible party (if applicable): AMPM Transport LLC
Facility Owner or Operator, or Discharger: AMPM Transport LLC
Contact Person: _____ Telephone Number: (732) 984-4071 County: Volusia
Facility or Discharger Mailing Address: 3006 Green Hollow Drive Iselin, NJ 08830
Location of Discharge (street address): I-4 EB MM 128.5
Latitude and Longitude of Discharge (if known) N:29 7'38" W:81 7'29"

4. Date of receipt of test results or discovery of confirmed discharge: 5/2/15 month/day/year 5. Estimated number of gallons discharged: 50

6. Discharge affected: Air Soil Groundwater Drinking water well(s) Shoreline Surface water (water body name) _____

7. Method of discovery (check all that apply)

Liquid detector (automatic or manual) Internal inspection Closure/Closure Assessment
 Vapor detector (automatic or manual) Inventory control Groundwater analytical samples
 Tightness test Monitoring wells Soil analytical tests or samples
 Pressure test Automatic tank gauging Visual observation
 Statistical Inventory Reconciliation Manual tank gauging Other _____

8. Type of regulated substance discharged: (check one)

Unknown Used/waste oil Jet fuel Heating oil New/lube oil
 Gasoline Aviation gas Diesel Kerosene Mineral acid
 Hazardous substance - includes CERCLA substances from USTs above reportable quantities, pesticides, ammonia, chlorine, and derivatives

Incident Narrative:

On May 2, 2015 at 17:49, Responder Hall received State Watch Office notification 2015-2836 regarding a petroleum release on I-4 east bound at mile marker 127. RA Hall contacted Noel Fetters with IMS who indicated that approximately 50 gallons of diesel fuel was lost to the soil as a result of the accident.

A DRF was received indicating that 50 gallons was lost to soil at MM 128.5. Follow-up with IMS found that the provided phone number for the responsible party was not valid, it is unknown if any further remediation was conducted.

1.23.17-Responder Fortune found this case in her outstanding cases and researched the trucking company information in SAFER. RA Hall sent one more email to IMS and see if any other/more accurate company information is available to this case to WCU.

2.7.17- forwarded e-mail previously sent to Noel with IMS to see if he has any other info. RA Hall googled the company and found the DOT number and another phone number for the company. The DOT number is listed as 2483439 (as of 2.7.17 it appears as inactive in SAFER database).

Also, there is a long inspection history report via Quick Transport Solutions on the web. This incident occurred 5.2.15. It appears AMPM Trucking LLC was insured from 5.6.14-5.6.15 (date of cancellation) by American Millennium Insurance Company CAL1001947. 5 Marine View Plaza Ste 201, Hoboken, NJ fax:201.714.9661

RA Hall was unable to contact the responsible party to obtain needed clean up documentation. OER is referring this incident to WCU for follow-up. This case can be closed.
